processed, with a time
& date stamp, which
can be imported into
Excel to create
bespoke management
information.

COMPANY DETAILS:

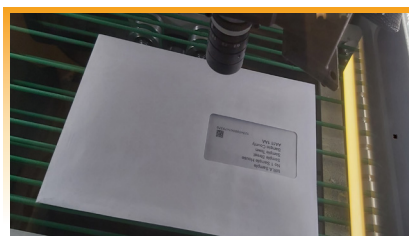

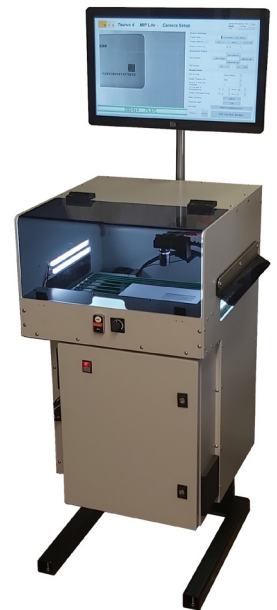

Mailing Technology & Support
Unit 18
Bates Industrial Estate
Church Road
Romford, Essex
RM3 0HU

Another bespoke development by MTS

Designed to provide an audit trail of every mail pack by time and date stamp.

KEY FEATURES & BENEFITS:

- Builds on existing investment – incorporates architecture, which gives it the flexibility to work with an inserter from any manufacturer
- Audit trail - as it reads a code through the window of an envelope, the data is captured, which can be either cross checked against an existing database or creates a database, providing an audit trail and management data of every mail pack
- Incorporates the latest camera technology, capable of dynamically reading a string of numerical characters, printed in most commonly used fonts as well as 2D Data matrix codes
- Incorporates a dedicated monitor, which provides the operator with real time information, alerting to errors as they occur, enabling quick rectification and minimising down time
- The same architecture can be expanded to provide the following added functionality:
 - ▶ Activate a mail sort kicker to identify mail breaks on the output conveyor
